AgriTraxx® AirCore™

For No-till farming to be as efficient as possible, the equipment needs to be as precise as possible. Precision starts from the ground up and your gauge wheels need to handle very aggressive terrain while being soft enough to not compact the soil. We made the solution - get the wear-life of polyurethane with the ground pressure of an air-filled rubber tire.

Flexible Polyurethane - Pliable enough to absorb variations in the soil surface

Longest Wear-Life - Engineered with the highest puncture resistance to easily resist damage from corn stalks, soybean stubble, & more.

Sheds Mud - Polyurethane has an inherently non-stick surface, matched with flexibility that flings off any sticky mud & dirt build up.

Guaranteed for 3 Years* - Changing out gauge tires is not fun or cheap - we guarantee you won't have to do it as often.

Resilient for All Soil Conditions

No-till fields can be rough on tires. Vegetation stalks and jagged rocks can make for a bumpy ride for your seeder/drill. AgriTraxx® AirCore™ acts like an additional shock absorber, conforming to debris & helping to maintain consistent seed depth. This also prevents the gauge tire from compacting the soil and promotes seed development.

*Refer to terms and conditions at www.SuperiorTire.com

Universal Fit

Available in both offset configurations to fit all split rim types.

7/8"

3/8"

3 Year Warranty

We developed the AgriTraxx® AirCore™ in the field with the help of farmers all over the country. Our trials proved they last a really long time. To back it up, we provide a written guarantee the AgriTraxx® AirCore™ will last you 3 years of No-till farming or we'll replace them.
